

Results of the Austrian-Indian Hydrobiological Mission 1976 to the Andaman-Islands:

Part VII: List of Fishes collected in running Waters of the Andaman-Islands

By FERDINAND STARMÜHLNER¹⁾

Manuskript eingelangt am 9. Mai 1983

Abstract

In the running waters of South- and North-Andaman seven species of fishes were recorded: *Clarias batrachus* (LINNÉ, 1758); *Heteropneustes fossilis* (BLOCH, 1797); *Aplocheilus panchax* (HAMILTON & BUCHANAN, 1822); *Doryichtys insularis* (HORA, 1925); *Ophiocephalus* (= *Channa*) *gachua* (HAMILTON & BUCHANAN, 1822); *Eleotris andamanensis* (HERRE, 1939); *Periophthalmus barbarus* (LINNÉ, 1758).

The Austrian-Indian Hydrobiological Mission 1976 to the Andaman-Islands has collected in different running water systems of South- and North-Andaman between headwaters and the mouth-zones. The recorded specimens of fishes were determinated by J. P. GOSSE (Chief of the Section of Fishes; Royal Institut of Natural Science of Belgium, Brussels). We thank gratefully Mr. GOSSE for his work. Following species were found:

Super-Class: PISCES
Class: Osteichthys
Sub-Class: Acanthopterygii
Super-Ordo: Teleostei
Ordo: Siluriformes
Familia: Clariidae
Genus: Clarias

1. *Clarias batrachus* (LINNÉ, 1758)

Locality: S.-And./10e¹/8. 12. 1976: Rivulet near the village of Bimblton, E of Port Blair; flowing through paddy-fields; borderd by some trees and scrub; sunny; in deeper pools watering-place for buffalos.

¹⁾ Univ. Prof. Dr. F. STARMÜHLNER, Institut of Zoology, University of Vienna, Althanstr. 14, B. P. 282, A-1090 Wien. (Promoted by the FONDS ZUR FÖRDERUNG DER WISSENSCHAFT, Project: No. 2942 and the Kulturamt der Stadt Wien.)

		SiO ₂ :	–	26	Cl:	12 10
		Col:	turbid (visibility: 20cm)			
		Col:	turbid (visibility: 20 cm)			
		Found:	1 specimen			

Distribution: India, Ceylon, Malay Peninsula and Archipelago, Philippines.

Familia: Heteropneustidae

Genus: Heteropneustes

2. *Heteropneustes fossilis* (BLOCH, 1797)

Localities: S.-And./10e/8. 12. 1979: Description see above by *Clarias batrachus*. 5 specimens.

S.-And./13 b/18. 12. 1976: Recurrent flow of a very slow flowing creek with large, deep pools near Mithakhrai; situated in a dense forest and very shady.

C:	30-50 cm/sec; b, p: 0-10 cm/sec	T.H.:	4.4°	-	Ca:	6 15
Gr:	gravel (3-5 cm Ø); b, p: muddy sand	C.H.:	3.8°	-	Mg:	- 10
Alg:	dense growth of filamentous <i>Spirogyra</i> sp.; <i>Compsogon caeruleus</i>	Alc:	1.5	-	T.Fe:	- 0.05
Te:	25.6° (10 ^b) - 27.1° C (12 ^b)	SiO ₂ :	-	13	Cl:	14 7
Col.:	clear					
Found:	somes specimens					

Distribution: India, Malay Peninsula and Archipelago, Thailand.

Ordo: Gasterosteiformes

Sub-Ordo: Syngnathoidei

Familia: Syngnathidae

Genus: *Doryichthys*

4. *Doryichthys insularis* (HORA, 1925)

Localities: S.-And./4 a, b/5. 12. 1976: Rivulet in the area of Chidiatop; approx. 300 m upstream of the mouth-zone and about 100 m upstream of the influence of brackish water of the recurrent flow during high-tide; flowing through plantations, paddy-fields and bordered by scrub and some trees; partly shady, partly sunny; floating roots and plants on the border.

Alt:	1-2 m	Te:	25.1° (9. ³⁰) - 27.6° C (11 ^b)		F	L
Br:	2-3 m	Che:	F	L		
D:	5 cm; p: 15-30 cm	Cond:	275	324	Na:	-
C:	30-50 cm/sec;	pH:	7.4	7.5	K:	-
	b, p: 0-10 cm/sec	T.H.:	10°	-	Ca:	19
Gr:	boulders (10-20 cm Ø);	C.H.:	10°	-	Mg:	-
	gravel	Alc:	3.3	-	T.Fe:	-
Alg:	c: floating <i>Spirogyra</i> cf. <i>decimi-</i> <i>na</i> ; p: 150 m downstream in the brackish zone: <i>Thorea ramosis-</i> <i>sima</i>	SiO ₂ :	-	12	Cl:	14
		Col:	clear			
		Found:	8 specimens near the border between floating roots and plants from the border.			

N.-And./2 1/13. 12. 1976: River Kalimpong on the W-slope of the Saddle Peak, approx. 4 km S of Diglipur; broad valley; righthand the steep slopes of the Saddle Peak with dense primary forest, lefthand cleared area with scrub and behind paddy-fields; sunny.

Alt:	50 m	Te:	24.9° (10 ^b) - 26.2° C (12 ³⁰)		F	L
B:	30-40 m; during dry season divided in 2-3 branches of 5-10 m	Che:	F	L		
		Cond:	272	306	Na:	-
		pH:	8	7.4	K:	-
D:	5-20 cm; b, p: 50 cm - >1 m	T.H.:	10°	-	Ca:	6
C:	50 cm/sec; b, p: 0-10 cm/sec	C.H.:	8.4°	-	Mg:	-
Gr:	boulders (5-20 cm Ø), gravel; b, p: sand amud, vegetable debris	Alc:	2.8	-	T.Fe:	-
		SiO ₂ :	-	26	Cl:	12
Alg:	paddings of <i>Spirogyra</i> sp.	Col.:	clear			
		Found:	1 specimen			

Distribution: Endemic for the Andamans; other species of the genus *Doryichthys* are widely distributed in coastal rivers of the Indopacific.

Ordo: Ophiocephaliformes (= Channiformes)

Familia: Ophiocephalidae (= Channidae)

Genus: *Ophiocephalus* (= *Channa*)

5. *Ophiocephalus* (= *Channa*) *gachua* (HAMILTON & BUCHANAN, 1822)

Locality: S.-And./19 d/21. 12. 1976: Description see above by *Aplocheilus panchax*: Found: 1 specimen.

Distribution: Beluchistan, Afghanistan, India, Ceylon, Malay Peninsula and Archipelago.

Ordo: Perciformes
 Sub-Ordo: Gobioidei
 Familia: Gobiidae
 Subfamilia: Eleotrinae
 Genus: *Eleotris*

6. *Eleotris andamanensis* (HERRE, 1939)

Locality: S.-And./4 b/5. 12. 1976: Description see above, by *Doryichthys insularis*. Found: 2 specimens.

Distribution: Endemic for the Andamans; other species of the genus *Eleotris* are widely distributed in coastal rivers of the Indopacific.

Subfamilia: Gobiinae
 Genus: *Periophthalmus*

7. *Periophthalmus barbarus* (LINNÉ, 1758).

Locality: S.-And./17B/20. 12. 1976: Small torrent from the hills near the Tourist-Home of Port Blair, mouth-region in opposite of the Fisheries – Jetty of the Harbour; the brook flows in the part of the mouth during the low tide approx. 100 m to the sea; during high tide this area is covered by sea water, flowing in a recurrent flow to the hill areas, also during low tide slightly brackish.

Alt:	1 m to mean sea level	Che:	F	L	F	L
B:	1-2 m (low tide)	Cond:	7521	9500	Na:	– 1750
D:	5-10 cm (low tide)	pH:	7.2	6.9	K:	– 75
Gr:	gravel, sand, dead corals, empty shells	T.H.:	>50°	–	Ca:	82 87
Te:	28.1° C (15 ^b)	C.H.:	7°	–	Mg:	– 245
		Alc:	1.8	–	T.Fe:	– 0.21
		SiO ₂ :	–	12	Cl:	3000 3360
		Found:	2 specimens			

Distribution: Shallows and brackish areas of the Indopacific.

Abbreviations

Alt: Altitude (in m above mean sea-level); **Br:** Breadth of the running water (in m); **D:** Depth of the running water (in cm or m); **b:** near the banks on the borders; **p:** in pools between cascades; **c:** cascades; **C:** velocity of the Current (in cm/sec or m/sec); **Col:** Colour of the water; **Gr:** Ground (mud, sand, gravel, boulders, rock); **Ø:** Diameter of stones or boulders; **Alg:** growth on Algae; **Te:** Temperature of the water (in ° Celsius); **Che:** Chemistry of the water-samples from the station; **F:** values found at the stations with Field-methods; **L:** values determinated in the Laboratory with exact laboratory-methods; **Cond:** electrolytic Conductivity (in μ Siemens by 20° C); **pH:** **T.H.:** Total Hardness (in German Hardness Degrees ° dH); **C.H.:** Carbonat Hardness (in ° KH degree); **Alc:** Alcalinity (in mval/l); **Na:** content on Na-ions (in mg/l); **Mg:** content on Magnesium-ions (in mg/l); **K:** content on Kalium-ions (in mg/l); **Ca:** content on Calcium-ions (in mg/l); **Cl:** content on Chlorid-ions (in mg/l); **T.Fe:** content on Total iron (in mg/l); **SiO₂:** content on Silicate (in mg/l); **–:** no measurement were executed.
