

## Type specimens of K.H. Rechinger in the Herbarium Ministerii Iranici Agriculturae

F. Termeh\*

### Abstract

Type specimens collected by K.H. Rechinger and stored in the herbarium IRAN are listed.

**Key words:** Flora of Iran; type specimens.

### Zusammenfassung

Von K.H. Rechinger gesammelte und im Herbarium IRAN aufbewahrte Typusbelege werden vollständig zitiert und aufgelistet.

### Introduction

The Ministry of Agriculture Herbarium is registered in Index Herbariorum (STAFLEU 1981). It is one of the units of the Plant Pests and Diseases Research Institute (Department of Botany) in Tehran, consists of 220000 specimens of flowering plants, and is the richest herbarium in Iran.

Collection of the specimens started in 1948 with the efforts of E. Esfandiari together with K.H. Rechinger and P. Aellen in Kerman, Baluchestan, Khorassan Provinces and parts of North Iran. A few specimens were collected before this date, the oldest one being *Nepeta bornmuelleri* HAUSSKN. collected in 1892 by Bornmüller from Hezar mountain in Kerman. This specimen was dedicated to the herbarium IRAN from the herbarium in Edinburgh [E].

The herbarium IRAN serves as a means of study and investigation and is considered by the Islamic Republic of Iran as a national asset. The total number of types of species and subspecies cited in MOUSSAVI et al. (1995) is 265, but the real number is 254. In this paper, type specimens of 81 species collected by or together with K.H. Rechinger preserved in the herbarium IRAN are listed. Most of them are isotypes and not mentioned in the original descriptions and/or in Flora Iranica (RECHINGER 1969 - 1992).

### Results and discussion

The specimens are listed in alphabetical order of families/genera/species. If put in synonymy today, the actual name is given in [ ]. The citation of publication, isotypic syno-

nymys (connected with "≡"), complete collectors of the specimen (in many cases only cited as "Rech. nr." in literature), and herbaria of other isotypes as far as known are listed.
